

Graduate Project in Computer Science

CPSC 597

Presentation and Demo

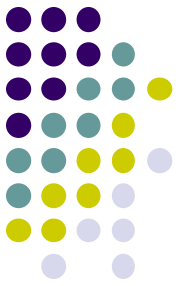

Project Presentation

- **What to present and demo**
 - Your project and project outcomes
- **Presentation format**
 - Recorded video presentation using ZOOM or other video recording tool
- **Required materials to submit**
 - PowerPoint slides to present your project within 20 minutes
 - Recorded video presentation (e.g., MP4)
- **When to present and demo in person**
 - Only if I will contact you to clarify or validate the outcomes that seem unclear

Tips for Making a Good Presentation

- **Begin** your presentation with a brief background of the project topic, motivation, problem to solve, and its significance, goals and objectives.
- **Present** approaches used, solutions and results, and whether or not you achieved the project goals.
- **Ensure** that everything in your presentation is both consistent with and supportive of your project problem, goals, and results.
 - If possible, use pictures or diagrams, instead of lengthy text.
 - Be clear about your key message. **DO NOT READ from slides!**
- **Manage** your time limiting your presentation to about 20 minutes.
- **Conclude** your project with your success criteria.
